

NAME

geometric-boundaries – calculate geometric boundaries

SYNOPSIS

geometric-boundaries *coordinates xyz.txt dist.txt nor.txt output.png*

DESCRIPTION

Calculate geometry boundaries as in **devas-visibility**. *coordinates* is a DeVAS-style coordinates file as in **devas-visibility**. The other input files are Radiance ASCII files specifying position, distance, and surface normals. Output is a PNG file with luminance boundary elements having a value of 255 and all other elements having a value of 0.
